Local Consumer Commerce

January 2018

DATA THROUGH
JAN 2018 **↑ 0.2%**

Highlights across all 14 metro areas

Local Consumer Commerce grew by 0.2 percent year-over-year in January 2018, a 0.7 percentage point increase from the 0.5 percent decline in spending registered in December 2017. Of the 14 metro areas we track, eight posted positive year-over-year growth rates, with the remaining six experiencing declines in spending.¹ Younger and lower income consumers continued to contribute to growth, with older and higher income consumers continuing to subtract from it. Small businesses made a strong contribution to year-over-year growth in January 2018, contributing 0.6 percentage points to growth.

About the Local Consumer Commerce Index

A measure of consumer spending. The LCCI is a measure of the monthly year-over-year growth rate of everyday debit and credit card spending across 14 US metro areas.

A unique lens. The LCCI is constructed from over 24 billion anonymized credit and debit card transactions from over 64 million Chase customers. Unlike many existing sources of data on consumer spending, the LCCI captures actual transactions, instead of self-reported measures of how consumers think they spend. The LCCI's geographically specific data provide a granular and timely view of how cities and their surrounding metro areas are faring on a monthly basis. The index also captures economic activity in consumer-facing retail and services sectors that previously have not been well understood by other data sources. These include activities in sectors such as food trucks, new businesses, and personal services.

Our sample. The LCCI measures everyday spending across 14 metro areas: Atlanta, Chicago, Columbus, Dallas-Fort Worth, Denver, Detroit, Houston, Miami, Los Angeles, New York, Phoenix, Portland (OR), San Diego, and San Francisco. Our portfolio of metro areas mirrors the geographic and economic diversity of larger metropolitan areas in the United States and accounts for 30 percent of retail sales nationwide.

A powerful tool. The LCCI is a powerful tool for city development officials, businesses and investors, and statistical agencies to better understand the everyday economic health of consumers, businesses, and the places they care about.

Spending by Metro Area

Largest Metro Areas

Los Angeles: Local spending at Los Angeles area merchants grew 0.1 percent year-over-year in January 2018, the highest growth rate among the large metro areas.

Houston: For the first time since August 2017, spending at Houston area merchants posted a negative growth rate, declining 0.3 percent year-over-year in January 2018.

The year-over-year unweighted average in local spending growth across the large metro areas declined 0.6 percent in January 2018.

Source: JPMorgan Chase Institute

Mid-Sized Metro Areas

San Francisco: Local spending at San Francisco merchants grew by 2.8 percent year-over-year in January 2018, the highest growth rate among the mid-sized metro areas.

Atlanta: Local spending in the Atlanta metro area declined 2.1 percent year-over-year in January 2018, the lowest growth rate among the mid-sized metro areas. Atlanta was the only mid-sized metro area to experience a spending decline in January.

The year-over-year unweighted average in local spending growth across the mid-sized metro areas grew 0.6 percent in January 2018.

Source: JPMorgan Chase Institute

Smaller Metro Areas

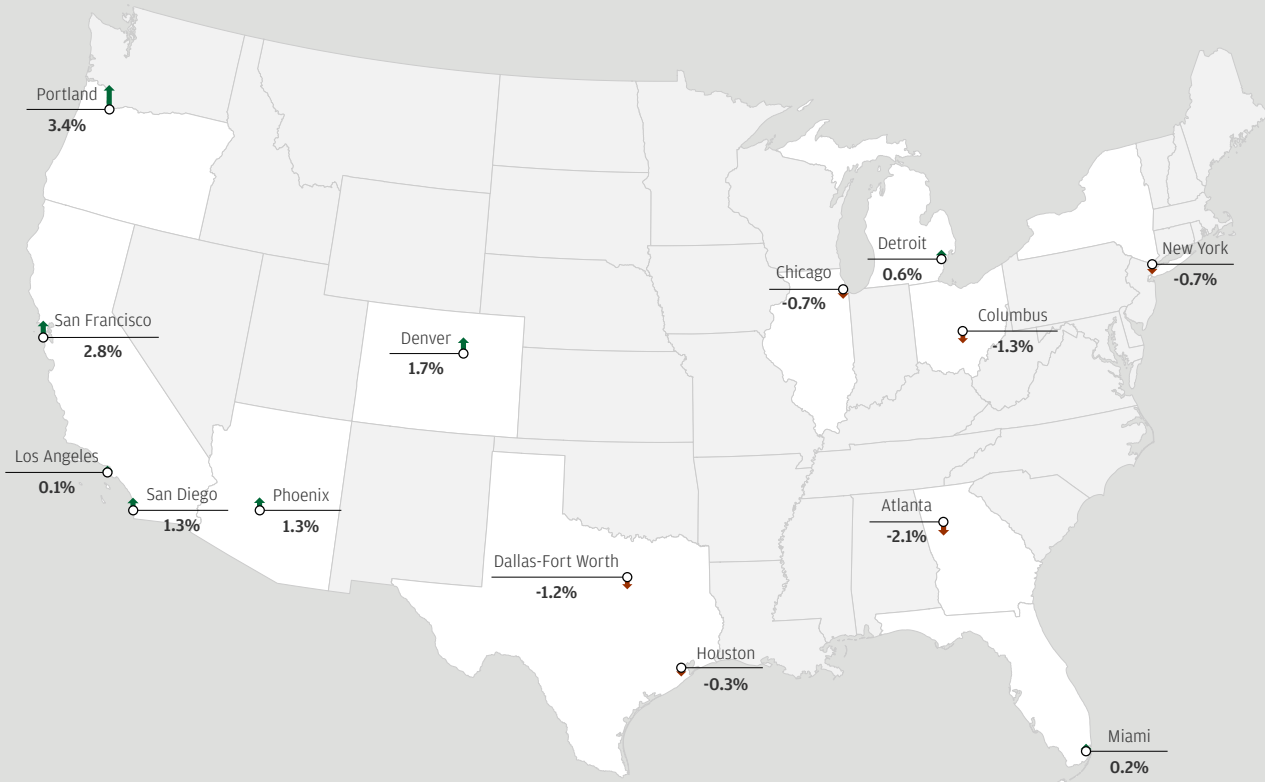

Portland: Local spending grew by 3.4 percent year-over-year in Portland in January 2018, the highest growth rate among the small metro areas.

Columbus: Spending at Columbus area merchants declined 1.3 percent year-over-year in January 2018, the lowest growth rate among the small metro areas.

The year-over-year unweighted average in local spending growth across the small metro areas grew 1.2 percent in January 2018.

Same Neighborhood: Spending from consumers who reside in the same neighborhood as the merchant contributed 0.5 percentage points to year-over-year growth in January 2018.

Same Metro Area: Spending by consumers in the same metro area as the merchant (but not the same neighborhood) subtracted 0.3 percentage points from year-over-year growth in January 2018.

Outside Metro Area: For the second month in a row, contributions from consumers outside of the metro area remained flat in January 2018.

Measuring Local Consumer Commerce

Local consumer commerce is the everyday spending of individuals on goods and services that impacts a local community. We observe local consumer commerce through the credit- and debit-card transactions of JPMorgan Chase customers for which we can establish a geographic location. This approach shares some conceptual similarities with other established measures (for example, the U.S. Census Bureau Monthly Retail Trade Survey and the U.S. Census Bureau Quarterly Services Survey), but differs in several significant ways.

In particular, our card-based perspective captures another important sector of commerce: spending at non-employer businesses, new businesses, and other small businesses that are often difficult to reach through establishment surveys. Moreover, in addition to restaurant spending observed by other data sources, our approach captures spending on a wide range of individual consumption-oriented services, including the barber and beauty shops, doctors and dentists, hotels, gyms, and local transportation providers that play a significant role in local economies.

Our card-based approach offers a detailed view of the types of products consumers purchase. However, this view does not capture spending by consumers through cash, checks, electronic transfers, or purchase orders. Importantly, the extent to which consumers use credit and debit cards to purchase services and goods varies significantly across product categories. In particular, differences in payment methods by product type lead us to a different perspective on the consumption of durable goods.

We classify firms as small, medium, or large based on market share calculated from transaction data and external Census and Small Business Administration (SBA) data. Firms with more than 8 percent market share are classified as large, and firms that qualify for SBA loans are classified as small. All other firms are considered medium.

For additional details on the construction of the data asset, see the online methodological appendix. The website also contains all of the data presented in this update, including the growth rate, share of spend, and growth contribution for each metro area by consumer age, income quintile, consumer residence relative to the business, product type, and business size.

Acknowledgements

We thank our research analysts, Bryan Kim and James Duguid, for their hard work and contributions to this research.

This effort would not have been possible without the critical support of the JPMorgan Chase Intelligent Solutions team of data experts, including Gaby Marano, Stella Ng, Steve Farrell, Michael Harasimowicz, and Bill Bowsbey, and JPMorgan Chase Institute team members including Caitlin Legacki, Courtney Hacker, and Gena Stern.

We would like to acknowledge Jamie Dimon, CEO of JPMorgan Chase & Co., for his vision and leadership in establishing the Institute and enabling the ongoing research agenda. Along with support from across the firm—notably from Peter Scher, Max Neukirchen, Patrik Ringstroem, Joyce Chang, and Judy Miller—the Institute has had the resources and support to pioneer a new approach to contribute to global economic analysis and insight.

Endnotes

- 1 Starting in August 2017, the Local Consumer Commerce Index readjusted its geographic scope to 14 metro areas, omitting Seattle. This decision was driven by a desire to streamline our lens to focus on local transactions, and due to merchant-specific transaction data changes.
